

Care instructions for Yoga mat tote case

- To remove dust, use a vacuum cleaner with a soft bristle brush attachment
- To get other material out of the crevices use a new, dry paintbrush to brush it out, or tweezers
- To mop up liquid spills, use a damp, clean cloth. Use only light detergent.
- For thorough cleaning - use a water spray hose and light detergent outdoors.
- Always rinse well and dry completely before using again.

Extremes of humidity and temperature will cause the wicker fibre to deteriorate:-

- Wet conditions, (too high humidity) can cause mold and mildew
- If you do notice mold or mildew, clean immediately with a mild solution of bleach in water.
- You may also need to use a vacuum cleaner first, with a soft-bristle brush to remove dirt and mold
- Wash with mild bleach solution, rinse well, then dry thoroughly in the shade on a warm, windy day.
- Do not use until completely dry, normally after about two days.
- Very hot and dry conditions will cause the fibre to dry out and become brittle
